

VR DAY

Space

We had a VR Session where we got to explore all around Space! We focused on the Earth and because of the amazing effects, it felt like we were falling off!

We learnt about the 8 planets and the order they are in. It is: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune.

We got to see them in our headsets which was really fun and creative, looking and describing the shapes and colours.

It was so much fun and our instructor had lots of fun facts!
